

## PALCO THP Mapping

### PALCO THP Geologic and Geomorphic Mapping Conducted

THP-level mapping of mass wasting features and sediment sources in proposed timber harvest plans in the upper Mattole River watershed. The assessments were designed to identify mass wasting features within timber harvest plan areas prior to plan submittal to CDF, and to provide recommendations for avoidance or mitigation. Mapping included both in-unit and road-related mass wasting features and sediment sources. (Pacific Lumber Company, Scotia, CA.)
