

McNeil Creek Analysis

Analysis of the Proposed McNeil Creek THP With Respect to Mass Wasting and Sediment Delivery Conducted

a review of a proposed timber harvest plan activities in the McNeil Creek watershed, near Trinidad, California. The field review was designed to assess the potential for the harvest activities to increase mass wasting and sediment delivery to the stream system, which serves as the commercial water supply for the Larrupin Café. Subsequently, performed a forensic study of fine sediment in the McNeil Creek watershed to identify sources of turbidity and fine particulate matter. (Larrupin Café, Trinidad, CA, and Green Diamond Resource Company, Korbé, CA.)
